
930 SCHOOL SAFETY

A separate document was developed in 2003 titled *Traffic Safety for School Areas Guidelines*. Analyses often show that at many locations, school crossing controls requested by parents, teachers, and other citizens are unnecessary and costly and tend to lessen the respect for controls that are warranted. The purpose of this document is to stress the point that regardless of the school location, safe and effective traffic control can best be obtained through the uniform application of realistic policies, practices, and standards developed through engineering studies.

Copies of the *Traffic Safety for School Areas Guidelines* are available on the ADOT web-page http://www.azdot.gov/highways/traffic/standards/School_Safety/Schoolsafety.pdf and from Engineering Records (publication # 30-012).
